- Internet Control System

ELEKTRAWEB POS RESTAURANT MANAGEMENT PROGRAM

Elektraweb POS Restaurant Management Program offers numerous advantages in managing your restaurant that cannot be found together in any other system. As a result, your restaurant will benefit from increase of profitability and gain of loyal customers. And all this with zero investment cost, because system works in the cloud. Register now, start using it immediately and pay only for what you use.

All the Features in One Program

With a single program, you will have access to all features necessary for effective and efficient restaurant management: online ordering, package ordering program, stock tracking, accounting, procurement, inventory, waiter and table tracking, analysis and reporting.

Manage Your Restaurant from Anywhere

With its web-based, cloud and mobile compatibility features, you can access the program from any place and any device with an Internet connection.

Best Friend of Your Service Staff

- You can easily access all product details (ingredients, visuals, preparation time... etc.)
- Additional requests, such as changes in ingredients or cooking preferences, can be easily forwarded to the kitchen.

Easily Manage Your Orders

The selected product can be increased or decreased as desired, without printing the check. Moreover, if an extra product is requested, it is added to that check and sent. Waiter gets immediately informed about ready orders.

Easiness of Use

Program is fast, easy to use and with a user-friendly application design. With the quick search option, you will find the product you are looking for by typing only a few characters.

No Need to Change Hardware

It is fully compatible with all kinds of hardware such as touch screen computers, mobile terminals, tablets, mobile phones, turnstiles etc. Even if you switch from a different system to Elektraweb POS, you will not have to change your hardware.

Get Payment with Any Option

In addition to many methods, such as cash, credit card, meal card, and payment from the account, it also allows your guests to pay in "partial" form. You can have checks in different currencies and follow detailed cash registers.

High Security Levels

- Elektraweb POS operates on a user-base. Owners can set and change the user authorizations in seconds.
- Activity of every user in the program is registered.
- You will never lose your data, as these are protected in Microsoft Azure.

ONLY SPEED IN YOUR RESTAURANTS, NO PLACE FOR ERRORS!

Monitor the Current Status of All Tables

You can follow the availability and cleanliness of the restaurant tables on a single screen, and easily check the current checks for each table.

ONLINE ORDER MANAGEMENT

Elektraweb POS provides all properties with a **FREE "Digital Menu"**, which can be easily added to company's website.

- Facilities can be easily accessed through both mobile and web. Guests can access the digital menu online or by scanning QR code.
- Online orders can be received for the table and/or room inside the facility, or for the address or take-away from outside the property.
- Food photos, ingredients, allergens, nutritional and energy values are displayed during online ordering, in the language preferred by the customer.
- > Customers can create their own favourite menus, and earn points for every order or share they make.

Kitchen Tracking

Up to 10 different kitchens can be followed by order printers or screens.

It is ensured that all orders are entered into the kitchen, while preparation and service time is monitored with touch screens.

Communication between service staff and kitchen is fully done via mobile devices.

Path the facility and its sustamore can promote products by

Both the facility and its customers can promote products by sharing them on social media. Direct sales can be made with a link added to social media pages, as well as periodic and limited campaigns.

You can define points or discounts for those customers who share your digital menu through their social media accounts. With each order or share they make, they can collect points.

Receive Payments with Virtual POS

Get your virtual POS immediately with zero cost and have online payments on your bank account the next day, without waiting. Accept credit and debit cards from all banks, make instalments and let your customers earn points.

Integration to Food Sales Systems

It can be integrated with food-sales websites in your country. Orders you receive from these sites are automatically registered into your system, without necessity to use another program.

Cash Register Integration

It can be integrated with all cash registers. As soon as you print the check, all information are transferred to the POS device and the receipt is automatically issued.

With Elektraweb POS management module, your guests can:

- Become a member with a single SMS confirmation
- > Create profile, favourite menus or easily re-order old ones
- > Get automatic allergen alert according to the member's profile
- Earn points from orders and shares made on social media
- > Upload money to e-wallet with credit card and pay with it during online ordering
- Use e-wallets for contactless payment with QR code within the facility

CRM

Members can enter their preferences into the system, and evaluate the facility and services with surveys and comments. With this application, companies get to better know their customers and ensure that any problems are immediately noticed and corrected. Members can be notified of campaigns or promotions via channels such as WhatsApp, SMS, with special discounts applicable for marriage, birthday and other anniversary celebrations.

E-Wallet

Your guests can prepay and load money into their digital wallets and spend it online or by showing the OR code on their mobile phone inside the facility. E-Wallet shows the points earned, as well as the balance and expenses.

E-Card

As soon as your guests become a member of the system, they will automatically get digital card. They can use this card on their phones throughout the facility or during online order. In this way, it has many advantages such as access control, payment and fast ordering.

Restaurant Management Procurement Module

Manage your purchasing processes from demand management, approval system, online bidding to online ordering with the highest efficiency and performance. Take control of all your procurement processes by entering your price agreements, budget numbers and approval rules.

Stock Tracking Module

- Multi-warehouse stock tracking
- Besides sales, follow-up of catering, casualties, personnel and unpaid items
- Instant drop from stock with recipe
- Consumption and inventory cost analysis with FIFO LIFO or average price
- Real cost analysis with stocktaking; tracking gaps and differences, integration of costs into accounting

Prescribing

- Track the cost of all products instantly according to the last purchase or the weighted average purchase price
- Know your total cost and profitability at the time of sales.
- Get instant warning about the vulnerabilities and shortages.

Production

- Automatically produce both semi-finished and finished products in advance or at the time of sale. Define nested unlimited recipes.
- Produce semi-finished products and track stock.

Staff management

Keep and manage the starting and finishing hours, active working types, number of transactions and shift calendars of the personnel.

Manage employment and leave notifications to the responsible institutions online, prepare online notification, transfer retirement and other payments to the payroll, all with a single click.

e-Invoice, e-Archive and e-Ledger

You can now send and receive e-invoices instead of paper ones. This saves time and paper. The infrastructure of our system is also suitable for the new e-accounting systems and ready to put into operation in the shortest time.

Contactless Applications

Entry - Access Systems Control

Members can use the doors and turnstiles for which they have passing permission by scanning the QR code created on their mobile phones.

Based on the membership type, a complete control can be achieved within the facility by defining the day, hour and time of entry.

Online Table Reservation

You can easily book a table online with the information on date, time and number of people. In addition, online payment collection for different organizations such as concerts, seminars, etc is also possible.

Order with Contactless Transactions within the Facility

NO MORE LOOKING FOR WAITERS AT THE BEACH

Guests can make transactions such as ordering, waiter call, account payment, comment or questionnaire filling in the facility from their own mobile phones.

Internet Security and Logging System

Make Room in Your Menu For the Internet

With isafe, you can provide the wireless internet service in the restaurant with logging done by following the adequate security legislations. isafe is all-in-one product, offering solution that consists of software + hardware,hotspot + logging + security. With isafe, you can sell high-speed internet to guests, and send your surveys and campaigns based on the information received during registration.
